

A Genome-wide genetic correlation

Overall psoriasis susceptibility versus frozen outcomes

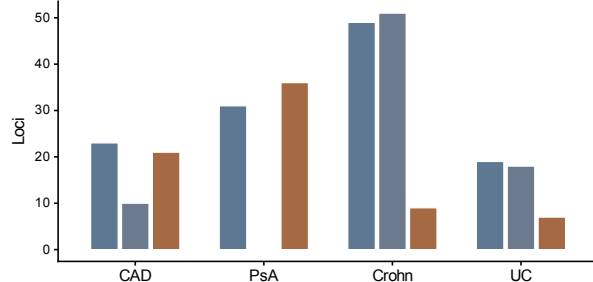

Genome-wide ○ FDR >= 0.05 ○ FDR < 0.05

QC ○ Near-neighbor/QC label ○ PASS ○ QC label

B Restricted LAVA local architecture

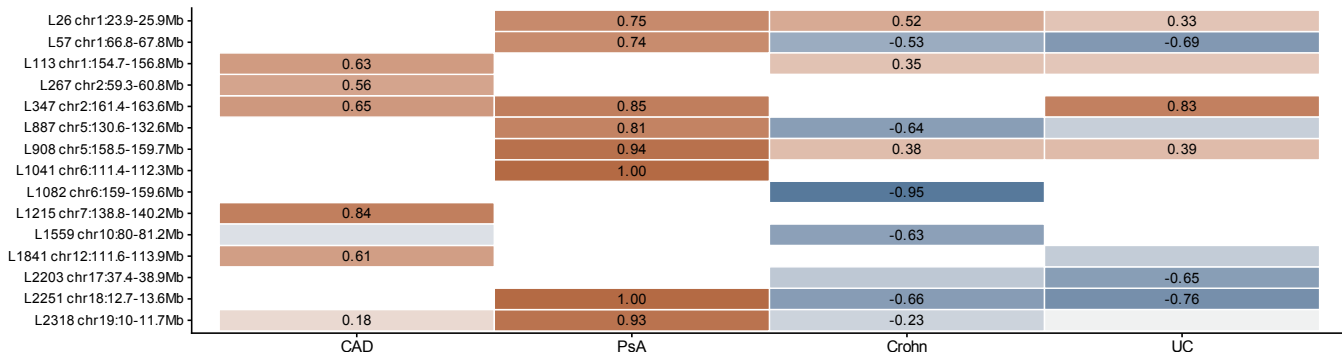

Local signal counts after joint local h2 screening

FDR-supported Nominal negative Nominal positive

C Directional local rg heterogeneity

Selected FDR-supported and pre-specified key loci

Local rho -1.0 -0.5 0.0 0.5 1.0
