

Phase 4C shared-locus eQTL prioritization

Robust local psoriasis-comorbidity loci resolve into stable tissue-supported regulatory-gene candidates

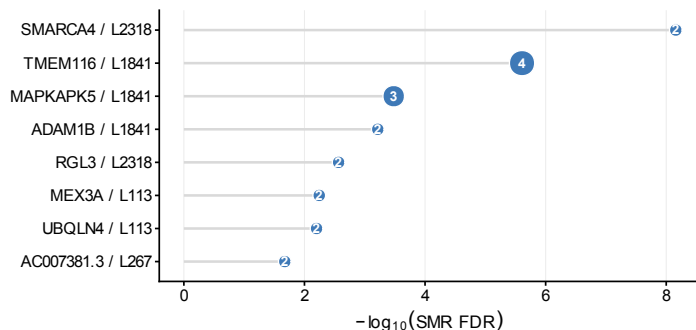

a Frozen regulatory-gene layer

91 SMR2-supported genes across Phase 4B-R loci

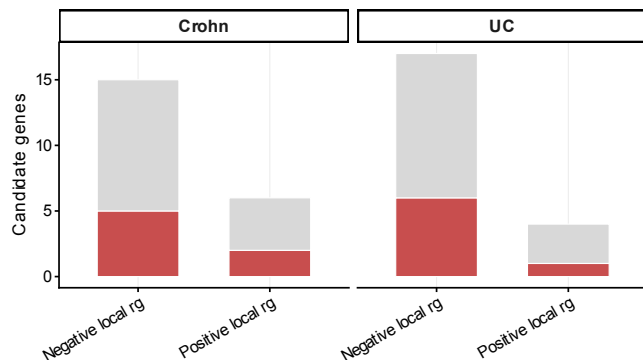

b CAD anchors the systemic track

TierA recurrent genes; point labels = tissue count

c IBD retains local-direction heterogeneity

Red = recurrent tissue support; grey = single-tissue support

d Probe-window sensitivity is stable

SMR2 did not introduce new primary genes
