

A Restricted eQTL colocalization

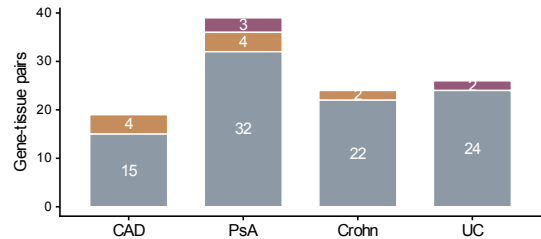

Only PP4-supported and suggestive candidates are shown

Outcome CAD PsA Crohn UC Tier PP4 high PP4 sugg.

B Coloc evidence tiers

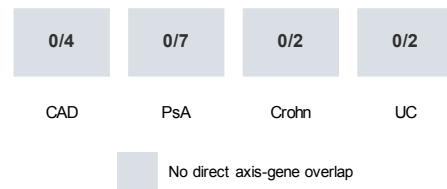

Most Tier A tests favoured distinct signals

Interpretation PP4 high PP4 sugg. PP3 dominant

C Axis-program overlap audit

Candidates versus frozen F1/F2/F6/F7 programs

Interpretation:
 PsA validates the coloc workflow.
 UC has a colon-specific
 sensitivity-labelled candidate.
 CAD remains architecture-level.
 F1/F2/F6/F7 are contextual
 layers, not genetic exposures.
